

# Responsive Design

Sep 8th 2021

Web & Mobile Design - DMA 331

Something to ask students

# **Reading Discussion**

# **Responsive vs Adaptive**

Fluid scaling and resizing vs fixed views that present at load. Responsive responds to browser resizing where adaptive loads a version of the site on launch

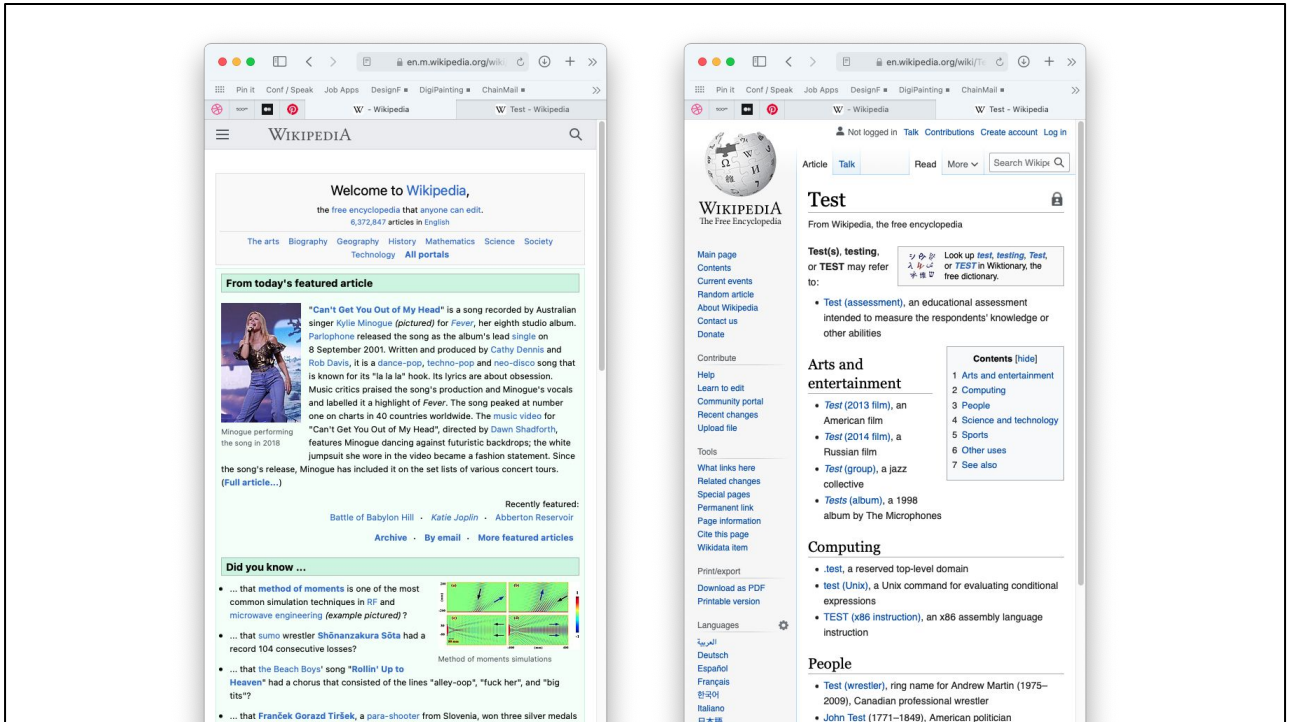

Responsive

Adaptive

<https://danielswanick.com/gifs-explaining-responsive-design/>

Adaptive... regardless of browser size it renders the same thing...

[https://en.m.wikipedia.org/wiki/Main\\_Page](https://en.m.wikipedia.org/wiki/Main_Page)  
<https://en.wikipedia.org/wiki/Test>

# Why Use Dedicated 'M.' Mobile Sites?

related to the idea of 'M.' or mobile site vs main sites

One of the readings mentioned that they have largely fallen out of favor,... but there are still reasons

## Why use Dedicated 'M.' Mobile Sites?

### Pros

Performance

Unique domain

### Cons

Maintenance

Unique domain

Unique domain - Pro sharable and findable

Unique domain - Sharing the link to desktop you get the wrong experience

With Breakpoints

Without Breakpoints

<https://os-system.com/blog/native-vs-hybrid-app-how-to-make-the-right-choice/>

**Native apps are built for a specific OS (iOS, Android, MacOS) and have independent codebases. Hybrid apps, on the other hand, can work across OS and share the same code base.**

Hybrid apps are less time-consuming to develop and need less maintenance. Having a single shared codebase allows developers to add new functionalities once. Native apps are more flexible and **offer better performance as well as security**. They offer a **better user experience and allow integration with OS-level features** such as a camera, mic, GPS, Bluetooth, etc.

This of course goes beyond mobile OSes and includes desktop and actually its more popular on desktop app through something called Electron Apps... slack is one of them!

# Let's Play with Figma

Figma and the assignment convo

# Designing Responsively

Where are your users?

Are the users moving around?

Is this a web app?

## **Mobile First? Desktop First?**

Do we want a native app?

Are the users desk bound?

Some questions you want to ask yourself... at the end of the day either approach can work.. Being consistent will help you and the team in the long run

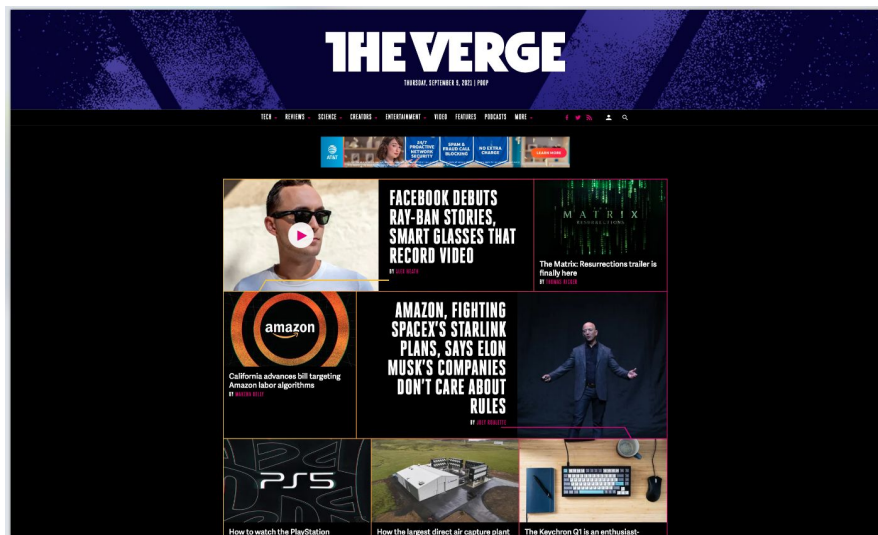

Maybe you want to shoot for the middle ground or the smallest device for the most constraints Think about leveraging an existing grid system.

**Consider content  
flow and hierarchy**

Dynamic space constraints  
change these properties

Scaling, font weight, ad placement, navigation retooling

**Precision of the tool + Click target size**

Different considerations.. Things like hover size / scale

## FITTS' LAW

THE TIME TO A TARGET DEPENDS  
ON THE RATIO OF DISTANCE

or  $T = \log_2 \left( \frac{D}{S} + 1 \right)$  SIZE

See how aspects of the Bootstrap grid system work across multiple devices with a handy table.

	Extra small <576px	Small ≥576px	Medium ≥768px	Large ≥992px	Extra large ≥1200px
Max container width	None (auto)	540px	720px	960px	1140px
Class prefix	.col-	.col-sm-	.col-md-	.col-lg-	.col-xl-
# of columns	12				
Gutter width	30px (15px on each side of a column)				
Nestable	Yes				
Column ordering	Yes				

<https://getbootstrap.com/docs/4.0/layout/grid/>

## Do your user needs change on device size?

# Stages of UX Maturity

NNGROUP.COM **NN/g**

Stage 1: A company at this stage is either **oblivious to UX** or **believes it does not need it**.

Stage 6: UX is the **norm** — **habitual, reproducible, and beloved** across the organization. Few companies operate at this stage.

# Other Concepts

- Onboarding
  - Hierarchy, constraints,
  - Information Architecture
  - Context is key, consider things like will this app be used at night or in the car? That will inform what you need to worry about and how to prioritize
- 
- Possible Projects: Weather application design, Health app, radiology?, Car Context for a mobile Interface?
  - 
  - Students may be coming into this completely new
  - Exposing students to my experiences and knowledge is important... maybe share something weekly
  - Ask students if there is anything specific they would like to get out of the class... what topic do you want to cover?
